- Thursday 11.00 - 12:30
- Thursday 15:00 - 17:00

Description

Consultancy specialised in the socio-economic analysis of environmental policies

Organization Type

Consultant

Country

Italy

Areas of Activities

Innovation

Environment

Sustainability

Request

Substitution of chemicals of concern

We are working for the Executive Agency for Small and Medium-sized Enterprises to promote the Partnership Opportunities Database for sustainable and circular solutions. We have selected a number of companies which developed circular technologies and are now searching for sale agents, distributors or offering license agreements.

Below some of the selected profiles:

1. A leading French manufacturer of ultraviolet light water treatment equipment designs, manufactures and markets systems and concepts of disinfection by ultraviolet light (UV-C) adapted to a large number of applications, including public swimming pools and spas, domestic and urban water purification, wastewater and drinking water, ballast water and more. Ultraviolet light is an alternative option to using chemicals which may have hazardous properties.
2. A Portuguese start-up offers different solutions for viable recycling of used food oils and their processing into 100% biodegradable detergents for floor, dishes, cloths, multi-surface, glass and liquid hand soap. The developed technology allows HoReCa actors (hotels, restaurants and cafes) to recycle the used cooking oil with economic benefits (savings of 20-40% in traditional cleaning products).

Keywords: water treatment detergents recycling of cooking oil

Cooperation Requested

- 1. Sales / Distribution**
- 2. License agreement**
